Level(s) test phase helpdesk
Update of water calculator, version 1.1

Changes made in version 1.1

- An "overview" worksheet has been included so that the key figures can easily be transferred to the common reporting format excel file (I have tried to align it as close as I can to the common reporting format).
- The irrigation option from level 1 has been removed in order to align the calculator with the Level(s) documentation.
- The office cleaning option has been removed from levels 1 and 2, in order to align the calculator with the Level(s) documentation.
- The greywater/rainwater harvesting inputs and outputs have been conditionally formatted to disappear in levels 1 and 2 when the WEI+ indicator for the river basin is <20.
- Scope for up to three "other uses" that consume significant quantities of water has been inserted in the level 3 reporting for office buildings.
- The terminology for the coefficients used to define vegetated areas has been more closely aligned with the approach in the Spanish Verde building assessment scheme.

Corrections based on user feedback

- Conversion from litres (L) to cubic metres (m³) was corrected in cells J66 and J67 of level 2 (it used the function *1000 when it should be /1000).
- Insertion of a calculation step for irrigation system efficiency in the Irrigation Calc. worksheet has now been done.
