Note on graffiti removal operation

The contracting authority may select which graffiti removal operation is the most suitable for the surface to be cleaned. For the following types of surfaces, the following graffiti removal methods are generally recommended:

- a. Masonry substrates – use blasting system removal*
- b. Wood substrates – paint over.*
- c. Non porous substrates – use chemical removers*
- d. Glass graffiti or etching- use chemical removers*
- e. Street signs – apply sensitive surface chemical graffiti removers (however the effectiveness depends on the graffiti)*

The contracting authority will have to specify the maximum percentage of all the ornamental plants or trees planted that should not be exceeded by each species. Recommended values X=15%.

**Experts are to be consulted to check whether the planted species are native species, or if they are alien, that they will not become invasive. Local or national lists of invasive plant species, as well as the List of Invasive Alien Species of Union concern detailed in Regulation 1143/2014 must be referred to.*

***Where possible, the following practices should be implemented to encourage the development of spontaneous natural flora and fauna:*

- *employ nectar-rich native plants able to provide wildlife benefits*
- *use just organic means of pest control*
- *leave standing decaying wood on site where appropriate to provide a habitat for wildlife*
- *encourage the well-being of desired native species*
- *mark some of the most visible areas with informative posters that explain the purpose of these measures*

+Landscaping and forestry activities should take into account the natural cycle of the plants and the wellbeing of the local fauna, by ensuring that:

- *natural grass areas are cut and maintained as 'meadow grassland'*
- *the pruning activities will be carried out outside of the breeding season*
- *the isolation of the habitats will be avoided ensuring the continuity of the natural systems where possible*

*)

Notes:

**Engines complying with a prior emission stage to Stage V, in accordance with the exemptions and transitional provisions set out in Article 10(7) of Directive 97/68/EC, Articles 34(7), 34(8) or 58(5) to 58(11) of Regulation (EU) 2016/1628, and Articles 11(4) and 14 of Commission Delegated Regulation (EU) 2015/96, or Article 13(3) to 13(6) of Commission Delegated Regulation (EU) 2018/985, are allowed to be installed, if they are retrofitted with DPF system certified according one of the following certificates and if they have a gravimetric separation efficiency of at least 90%:*

- Anlage XXVII Nummer 3 StVZO
- UNECE Regulation R 132, reduction stage 01, Class I or II
- FAD e.V. Siegel (Status February 2015 or newer)
- VERT filter list (Status September 2016 or newer)
- BAFU filter list

'Central governments that purchase products, services or buildings, insofar as this is consistent with cost-effectiveness, economical feasibility, wider sustainability, technical suitability, as well as sufficient competition, shall:

...

..- purchase only tyres that comply with the criterion of having the highest fuel energy efficiency class, as defined by Regulation (EC) No 1222/2009 of the European Parliament and of the Council of 25 November 2009 on the labelling of tyres with respect to fuel efficiency and other essential parameters. This requirement shall not prevent public bodies from purchasing tyres with the highest wet grip class or external rolling noise class where justified by safety or public health reasons'

Note on the purchase of maintenance services

The contracting authority may include these criteria within the call for tenders of vehicles maintenance services, however these criteria just cover a small part of the

maintenance activities and cannot be considered as EU GPP criteria for vehicles maintenance services

Note on requirements for Central Government procurement on the purchase of tyres

Article 6 and Annex III of the Energy Efficiency Directive (2012/27/EU), which had to be transposed into national law by June 2014, set out specific obligations for public authorities to procure certain energy efficient equipment. This includes the obligation to purchase only those tyres that:

fWta d'm k]h' h\Y' W]hYf]cb' cZ \Uj]b[' h\Y' \][\Ygh' Z' Y' YbYf[m' YZ]WYbWn' WUggz' Ug' XYZ]bYX' VmFY[i' U]cb' f97L' Bc' %&&&#&\$-\$- 'cZ h\Y' 9i' fcdYUb' DUF']Ua' Ybh' UbX' cZ h\Y' 7ci' bW' cZ &)' Bcj' Ya' VYf' &\$-\$- ' cb' h\Y' 'UVY'']b[' cZ' hmfYg' k]h' fYgdYVh' hc' Z' Y' YZ]WYbWn' UbX' chYf' YggYbh]U' dUfUa' YhYfg'' H\]g' fYei']fYa' Ybh' a' i' gh' bch' dfYj' Ybh' di' V']WVcX]Yg' Z' ca' di' fWUg]b[' hmfYg' k]h' h\Y' \][\Ygh' k' Yh' [f]d' WUgg' cf' YI' hYfbU' fc'']b[' bc]gY' WUgg' k' \YfY' 'i' gh]Z]YX' Vm' gUZ]micf' di' V']W\YU' h' fYUgcbgD

This obligation is limited to central government and for purchases above the thresholds set out in the procurement directives. Moreover, the requirements have to be consistent with cost-effectiveness, economic feasibility, wider sustainability, technical suitability and sufficient competition. These factors can differ between public authorities and markets. For more guidance on the interpretation of this aspect of Article 6 and Annex III of the EED regarding procurement of energy-efficient products, services and buildings by central government authorities, please see the Commission guidance document COM/2013/0762 final, Communication from the Commission to the European Parliament and the Council, Implementing the Energy Efficiency Directive – Commission Guidance.

Regulation (EC) No 1222/2009 is currently under revision, and as part of this process, the European Commission has put forward proposal COM(2018) 296. This CPC will need to be updated according to the new legislation, once it is in force.

Note: the contracting authority may points at award stage to those tenders offering significant improvements in their environmental management measures.

Explanatory notes:

The indicators to monitor the environmental issues are recommended to be based on the functional unit 'm² of maintained area' (e.g. litres of water consumed per m², litres of consumable per m²). The minimum monitoring frequency recommended is once per season (four per year) during representative weeks. A representative week means a week where the level of activity is approximately the average of each season.

In case of biodiversity, the selection of indicators that enable the monitoring of this environmental aspect may be difficult. The ideal indicator would be objective-based, for example, an objective may be increasing the population of passerines, and the indicator would be the evolution of number of these birds. This needs to be estimated by capturing samples, and may be too costly. In that case, it is recommended to set indicators for the actions carried out to accomplish the objective: number of occupied nest boxes, increment of tree density and patch connectivity, etc.
